Leave a 20 mm gap at the sides and back for insulation.
Back at the top, front at the bottom.

PLANNING NOTES

These are product sizes, not a building-opening size. Ask us for the opening size before you build.
The body and gather are 1,180 mm high together. Plan the complete setup.
Use a suitable non-combustible surround with independent masonry support above.
Confirm the opening and the actual unit before you build.
Confirm the flue route, the gas supply and the ventilation before work begins.
Arrange gas work with a registered gas installer.
Use wood or charcoal only in the charcoal section. Do not place solid fuel on the gas burners.
Included: the two-burner gas grill and the model 700 charcoal section with an adjustable grid, an ash drawer and a potjie hook; top and bottom doors, a light fitting, insulation and touch-up paint.
Flue pipes, collars and cowl are separate.
Use the 350 × 500 mm rectangular flue profile. The fitted height depends on joint overlap and the route.
