Chad-O-Chef Firepit Burner

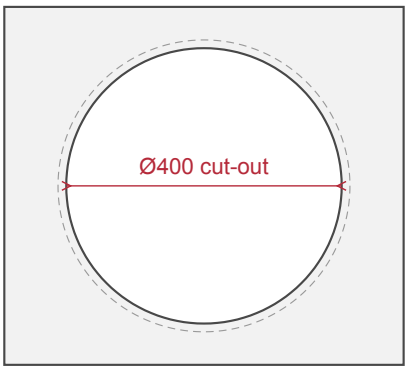

Gas burner kit for a fire pit you build: LPG, with logs or black glass

01 TOP VIEW

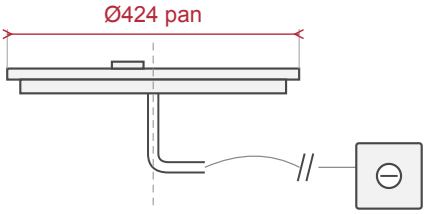

The logs or the black glass lie in the pan.

02 HOLE IN THE TABLE TOP

Dashed: the pan rim covers the edge of the hole.

03 SIDE VIEW

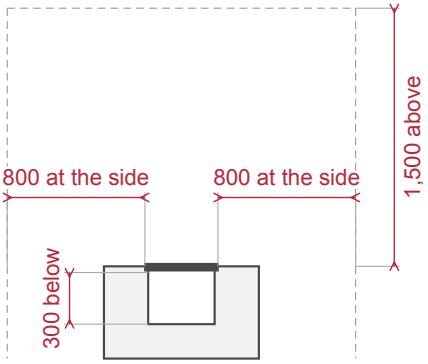

Gas line from the burner to the control box.

04 VENT PANEL

Two vent panels come with the kit.

05 CLEARANCES (SMALLER SCALE)

The smallest clear spaces around the burner: above it, at each side and under it.

PLANNING NOTES

You build the fire pit. The burner pan sits in a round cut-out in its top.
The kit uses LPG, with piezo ignition and an ODS pilot.
The fire pit still needs a full ventilation and gas design. Use the burner instructions for it.
A registered gas installer must check the clearances, the gas supply and the ventilation of your fire pit.
These are product sizes, not the size of the fire pit. Ask us for the build sizes before you build.
