05 CLEARANCES, FRONT (SMALLER SCALE)

PLANNING NOTES

It stands on the floor against an open wall. We recommend a heat-resistant floor and wall covering.
It runs on LPG or natural gas, set up for your gas type.
It uses at most 0.84 kg of LPG an hour.
A pilot oxygen depletion safety system works at a minimum of 18.5% oxygen.
We suggest a room of 544 m³ (163 m²) at most, subject to insulation, materials and climate.
A room below the minimum size needs permanent ventilation, calculated by your gas installer.
Ask us for that minimum room size.
Do not install it in a bedroom, bathroom, toilet or sauna.
A gas installer registered with SAQCC Gas for your gas type must install it.
In the box: the fireplace outer and inner, the decorative stones and the manual.
The remote comes only if you choose it.
